

Targeting Analyst, Emergency Cash - Skills Test

Logistics

- Please spend no more than two hours total. Email your document(s) back within 2 hours from when you received it.
 - Use any tools you like (documents, analysis programs, spreadsheets, mapping tools). If you use a LLM, please add a brief note about how you used it.
 - Submit the outputs defined under the steps in the task section.
-

Scenario

It's April 2026. Intense, cumulative rainfall in Kenya has resulted in extensive flooding across the country. GiveDirectly is considering a response and the team needs to identify 5,000 people for an emergency cash assistance program in the next 2 days. The goal is to target people in poverty and who were impacted by the disaster.

Task: Provide Targeting Recommendation

You are a **Targeting Analyst** supporting the Emergency Cash team and your task is to provide a targeting recommendation of areas and/or subpopulations to target. Follow the steps below.

1. Review the data sources provided.
2. Design a simple custom index that incorporates the core disaster and poverty dimensions, selecting specific indicators.
 - a. **Output:** spreadsheet, document, or visual overview of custom index components.
3. Produce a geographic prioritization at the admin 2 level.
 - a. **Output:** tabular dataset (using the real data from sources provided below) or map
4. Provide a **short** summary (1-2 paragraphs or bulletpoints) that covers key choices or tradeoffs you made when designing the index and producing the targeting recommendation.
 - a. **Output:** write up in your spreadsheet/tabular data file, document, or on the map.

Data sources provided:

- Disaster
 - [GloFas \(folder\)](#)
 - [Floodscan \(folder\)](#)
 - [CHIRPS](#) (2026-Apr-10 23:09 dataset)
- Poverty/vulnerability
 - [IPC food insecurity](#)

- <https://data.humdata.org/dataset/kenya-mpi>
 - Other
 - [Admin 2 boundaries](#)
 - [Worldpop](#)
 - [Schools](#)
 - [Roads](#)
 - [Health Facilities](#)
-

There is **no single correct answer**. We care more about *how you think* than the specific result.
